

DEALING WITH DISEASES

THERE IS FUNGUS AMONGUS!

General Guidelines for a Healthy Disease Free Yard...

- Debris cleanup
- Proper pruning
- Air circulation
- Right plant in the right place – shade/sun
- Drainage
- How disease cycle starts on plants
- Avoid overhead watering
- Watch plants early and often
- Watch the weather – rainy springs means more disease
- Choose the right spray
- Spray at proper time
- Learn how/when to spray
- Clean your pruners when cutting diseased plant
- You feed your children – feed your plants
- Get a diagnosis if you aren't sure – cultural damage vs. disease

Most Common Diseases In Our Yards...

Turf – Red thread, pink thread, snow mold, dollar spot

- Natural – Try Bonide's Neem Oil to suppress, Bonide's Revitalize disease control (Bacillus) also. Must repeat application to be effective.
- Chemical – Infuse Lawn granules or hose end spray to cure
- Mushrooms in turf – Consan 20 works great as spray in turf to control mushrooms

Roses – Black spot, powdery mildew, rust

- Natural – Use Bonide's Rose Rx (Neem Oil) or Biofungicide (natural Bacillus)
- Chemical – Use Bonide's Rose Shield Systemic (root pour) every 6 weeks, or spray Bonide's Rose Shield concentrate once a month.

Fruit Trees/Berries – Scab, blight, mildew, rust, peach leaf curl, mummy berry

- Natural – Use Bonide's Orchard Spray in season, use Monterey Horticultural Oil/Liquicop in season and/or as dormant spray.
- Chemical – Only safe ones are Fungonil and Copper. Fungonil is also only control for Mummy Berry on blueberries. Copper is superior spray for Peaches/Apricots/Nectarines.

Flowering Cherries/Plums – Blossom blight

- Natural – Use Liquicop or Copper Fungicide before and after bloom
- Chemical – Lots of options out there

Dogwoods – Anthracnose

- Natural – Dormant spray with Copper Fungicide
- Chemical – Lots of options including Fungonil

Vegetables/Tomatoes – Leaf spots, blights

- Natural – Bonide's Tomato and Vegetable Spray (sulfur), Rot Stop to correct Calcium deficiencies, Neem Oil, Bonide's Revitalize disease Control (Bacillus).
- Chemical – Fungonil is safe for edibles watching the spray before harvest for crops

Rhododendrons/Azaleas/Camellias – Leaf spots, powdery mildew, root rots, sooty mold, leaf gall

- Natural – Try Copper Fungicide, Bonide's Revitalize disease Control (Bacillus).
- Chemical – Fungonil, Infuse Systemic Fungicide (liquid only).

General Deciduous Trees and Shrubs – problems of all kinds

- Natural – Use some form of Copper, Revitalize disease Control (Bacillus)
- Chemical – Use Fungonil (phase one), and Infuse (phase two – but never on edibles)

Conifers – Needle cast, tip blights

- Natural – Use Copper
- Chemical – Use Fungonil

- **Remember to choose the right spray for your problem!**
- **Remember timing is everything! Don't wait until it is too late!**
- **Remember to GO GREEN and use natural/organic products when you can! Be proactive and stay ahead with organics.**
- **Always read label instructions and use properly!**

INSIDIOUS INSECTS

WATCH FOR THEM EARLY!

General Guidelines For A Healthy Insect Free Landscape...

- Debris cleanup
- Right plant in the right place
- Watch plants early and often
- Choose the right spray
- Spray at proper time
- Learn how to spray

- What happened last season? Dormant spray and be proactive the next season!
- Topical vs. systemic vs. organic
- Know your plants and what they are prone to attract
- Keep in mind adults vs. larvae vs. eggs
- Always get a diagnosis if you aren't sure

Most Common Insects In Our Yards...

Sucking Types – Aphids, whiteflies, mites
