

Why Hellebores?

Hellebores are the life of a winter garden, being both versatile & reliable. There is a wide selection of varieties that can offer blooms from November into early spring, they are a season starter. Gold Collection hellebore varieties offer drought tolerance and better disease resistance. Most hellebores are also deer resistant. They are bright and dramatic, making them terrific for containers, and they are great in part shade, but coastal area can get away with full sun.

This chart represents when Hellebores naturally bloom in the garden...
